Safety and warning information

Before you switch ON the appliance

Please read the operating and installation instructions carefully! They contain important information on how to install, use and maintain the appliance.

The manufacturer is not liable if you fail to comply with the instructions and warnings. Retain all documents for subsequent use or for the next owner.

Technical safety

This appliance contains a small quantity of environmentally-friendly but flammable R600a refrigerant. Ensure that the tubing of the refrigerant circuit is not damaged during transportation and installation. Leaking refrigerant may cause eye injuries or ignite.

If damage has occurred

- Keep naked flames and/or ignition sources away from the appliance,
- thoroughly ventilate the room for several minutes,
- switch off the appliance and pull out the mains plug,
- inform customer service.

The more refrigerant an appliance contains, the larger the room must be in which the appliance is situated. Leaking refrigerant can form a flammable gas-air mixture in rooms which are too small. The room must be at least 1 m³ per 8 g of refrigerant. The amount of refrigerant in your appliance is indicated on the rating plate inside the appliance.

If the power cord of this appliance is damaged, it must be replaced by the manufacturer, customer service or a similarly qualified person. Improper installations and repairs may put the user at considerable risk.

Repairs may be performed by the manufacturer, customer service or a similarly qualified person only.

Only original parts supplied by the manufacturer may be used. The manufacturer guarantees that only these parts satisfy the safety requirements.

A extension cable may be purchased from customer service only.

Important information when using the appliance

- Never use electrical appliances inside the appliance (e.g. heater, electric ice maker, etc.). Risk of explosion!
- Never use a steam cleaner to defrost or clean the appliance! The steam may penetrate electrical parts and cause a short-circuit. Risk of electric shock!
- Do not use pointed or sharp-edged implements to remove frost or layers of ice. You could damage the refrigerant tubing. Leaking refrigerant may ignite or cause eye injuries.
- Do not store products which contain flammable propellants (e.g. spray cans) or explosive substances in the appliance. Risk of explosion!
- Do not stand or support yourself on the base, drawers or doors, etc.
- Before defrosting and cleaning the appliance, pull out the mains plug or switch off the fuse. Do not pull out the mains plug by tugging the cable.

- Bottles which contain a high percentage of alcohol must be sealed and stored in an upright position.
- Keep plastic parts and the door seal free of oil and grease. Otherwise, parts and door seal will become porous.
- Never cover or block the ventilation openings for the appliance.
- People (children incl.) who have limited physical, sensory or mental abilities or inadequate knowledge must not use this appliance unless they are supervised or given meticulous instructions.

Children in the household

- Keep children away from packaging and its parts.
Danger of suffocation from folding cartons and plastic film!
- Do not allow children to play with the appliance!
- If the appliance features a lock: keep the key out of the reach of children!

General regulations

The appliance is suitable for refrigerating food.

This appliance is intended for use in the home and the home environment.

The appliance is suppressed according to EU Directive 2004/108/EC.

The refrigeration circuit has been checked for leaks.

This product complies with the relevant safety regulations for electrical appliances (EN 60335-2-24).

Information concerning disposal

Disposal of packaging

The packaging protects your appliance from damage during transit. All utilised materials are environmentally safe and recyclable. Please help us by disposing of the packaging in an environmentally friendly manner.

Please ask your dealer or inquire at your local authority about current means of disposal.

Disposal of your old appliance

Old appliances are not worthless rubbish! Valuable raw materials can be reclaimed by recycling old appliances.

This appliance is identified according to the European guideline 2002/96/EC on waste electrical and electronic equipment – WEEE. The directive specifies the framework for an EU-wide valid return and re-use of old appliances.

Warning

Redundant appliances

1. Pull out the mains plug.
2. Cut off the power cord and discard with the mains plug.
3. Do not take out the trays and receptacles: children are therefore prevented from climbing in!
4. Do not allow children to play with the appliance once it has spent its useful life. Danger of suffocation!

Refrigerators contain refrigerant and gases in the insulation. Refrigerant and gases must be disposed of professionally. Ensure that tubing of the refrigerant circuit is not damaged prior to proper disposal.

Scope of delivery

After unpacking all parts, check for any damage in transit.

If you have any complaints, please contact the dealer from whom you purchased the appliance or our customer service.

The delivery consists of the following parts:

- Built-under appliance
- Interior fittings (depending on model)
- Bag containing installation materials
- Operating instructions
- Installation manual
- Customer service booklet
- Warranty enclosure
- Information on the energy consumption and noises

Ambient temperature and ventilation

Ambient temperature

The appliance is designed for a specific climate class. Depending on the climate class, the appliance can be operated at the following temperatures.

The climate class can be found on the rating plate. Fig. 13

Climate class	Permitted ambient temperature
SN	+10 °C to 32 °C
N	+16 °C to 32 °C
ST	+16 °C to 38 °C
T	+16 °C to 43 °C

Note

The appliance is fully functional within the room temperature limits of the indicated climatic class. If an appliance of climatic class SN is operated at colder room temperatures, the appliance will not be damaged up to a temperature of +5 °C.

Ventilation

Fig. 1/6

The refrigeration unit is ventilated only via the ventilation grille in the base. Never cover the ventilation grille or place anything in front of it. Otherwise the refrigeration unit must work harder, increasing the power consumption.

Connecting the appliance

After installing the appliance, wait at least 1 hour until the appliance is switched on. During transportation the oil in the compressor may have flowed into the refrigeration system.

Before switching on the appliance for the first time, clean the interior of the appliance (see chapter "Cleaning the appliance").

Electrical connection

The socket must be near the appliance and also freely accessible following installation of the appliance.

The appliance complies with the protection class I. Connect the appliance to 220-240 V/50 Hz alternating current via a correctly installed socket with protective conductor. The socket must be fused with a 10 to 16 A fuse.

For appliances operated in non-European countries, check whether the stated voltage and current type match the values of your mains supply match the values of the mains supply. This information can be found on the rating plate. Fig. 13

Getting to know your appliance

Please fold out the illustrated last page. These operating instructions refer to several models.

The features of the models may vary. The diagrams may differ.

Fig. 1

- 1 Light switch
- 2 Temperature controller/light
- 3 Glass shelf in the refrigerator compartment
- 4 Pull-out container
- 5 Vegetable container
- 6 Ventilation opening
- 7 Shelf for butter and cheese
- 8 Egg rack
- 9 Shelf for large bottles

Switching the appliance on

Turn temperature controller, Fig. 2/A, from position 00. The appliance begins to cool. Light is switched on when the door is open.

Operating tips

The refrigerator compartment temperature rises:

- if the appliance door is opened frequently,
- if large quantities of food are placed in the refrigerator compartment,
- if the ambient temperature is high.

Setting the temperature

Turn temperature controller, Fig. 2/A, to the required setting.

When the controller is at a medium setting, the temperature drops to approx. +4 °C in the coldest zone. Fig. 3

Higher settings lower the temperature in the refrigerator compartment.

We recommend:

- Perishable food should not be stored above +4 °C.
- Low setting for short-term storage of food (energy-saving mode).
- Medium setting for long-term storage of food.
- Select a higher setting only temporarily, when the door is frequently opened or large quantities are placed in the refrigerator compartment.

Refrigeration capacity

The temperature in the refrigerator compartment may rise temporarily if large amounts of food or a lot of drinks are placed inside.

Therefore the temperature controller should be set to a higher setting for approx. 7 hours.

Usable capacity

Information on the usable capacity can be found inside your appliance on the rating plate. Fig. 13

Refrigerator compartment

The refrigerator compartment is the ideal storage location for ready meals, cakes and pastries, preserved food, condensed milk, hard cheese, fruit and vegetables sensitive to cold as well as tropical fruit.

Note when loading products

Wrap or cover food before placing in the appliance. This will retain the aroma, colour and freshness of the food. In addition, flavours will not be transferred between foods and the plastic parts will not become discoloured.

Note

Avoid contact between food and rear panel. Otherwise the air circulation will be impaired.

Food or packaging could freeze to the rear panel.

Note the chill zones in the refrigerator compartment!

The air circulation in the refrigerator compartment creates different chill zones:

- Coldest zone is in the pull-out container. Fig. **3**

Note

Store perishable food (e.g. fish, sausage, meat) in the coldest zones.

- Warmest zone is at the very top of the door.

Note

Store e.g. cheese and butter in the warmest zone. When served, the cheese will not have lost its flavour and the butter will be easy to spread.

Interior fittings

You can reposition the shelves inside the appliance and the door shelves as required:

- Lift the glass shelves, pull forwards, lower and swivel out to the side. Fig. **4**
- Reposition stoppers and re-insert shelf. Fig. **5**
- Lift the door shelf and remove. Fig. **6**

Special features

(not all models)

Pull-out container

Fig. **7**

The pull-out container is especially suitable for the storage of foods which contain meat. It can be taken out for loading, unloading and cleaning.

Vegetable container with cover

Fig. **8**

The vegetable container can be taken out for loading, unloading and cleaning.

Bottle holder

Fig. **9**

The bottle holder prevents bottles from falling over when the door is opened and closed.

Sticker [OK]

(not all models)

The [OK] temperature monitor can be used to determine temperatures below +4 °C. Gradually reduce the temperature if the sticker does not indicate [OK].

Note

When the appliance is switched on, it may take 12 hours until the temperature is reached.

Correct setting

Switching off and disconnecting the appliance

Switching the appliance off

Turn temperature controller, Fig. 2/A, to position [0]. Refrigeration unit and light switch off.

Disconnecting the appliance

If you do not use the appliance for a prolonged period:

1. Switch off the appliance.
2. Pull out mains plug or switch off fuse.
3. Clean the appliance.
4. Leave the appliance door open.

Defrosting

Refrigerator compartment defrosts fully automatically

While the refrigerating unit is running, beads of condensation or hoarfrost form at the back of the refrigerator compartment. This is quite normal. It is not necessary to wipe off the condensation or frost. The rear panel defrosts automatically. The condensation runs into the condensation channel, Fig. 10, and is conveyed to the refrigerating unit where it evaporates.

Note

Keep the condensation channel and drainage hole clean, so that the condensation can run out.

Cleaning the appliance

Caution

- Do not use abrasive, chloride or acidic cleaning agents or solvents.
- Do not use scouring or abrasive sponges. The metallic surfaces could corrode.
- Never clean shelves and containers in the dishwasher. The parts may become deformed!

Proceed as follows:

1. Before cleaning: Switch the appliance off.
2. Pull out the mains plug or switch off the fuse.
3. Clean the appliance with a soft cloth, lukewarm water and a little pH neutral washing-up liquid. The rinsing water must not run into the light.
4. Wipe the door seal with clear water only and then wipe dry thoroughly.
5. Rinsing water must not run through the drainage hole into the evaporation area.
6. After cleaning reconnect and switch the appliance back on.

Interior fittings

All variable parts of the appliance can be taken out for cleaning.

Take out glass shelves

Fig. 4

Lift the glass shelves, pull forwards, lower and swivel out to the side.

Taking out pull-out container

Fig. 7

Lift the container and pull out.

Condensation channel

Fig. 10

To clean the condensation channel, take out the pull-out container. Fig. 11/4

Regularly clean the condensation channel and drainage hole with a cotton bud or similar implement to ensure that the condensation can drain.

Taking out vegetable container with cover

Fig. 8

Lift vegetable container and take out forwards.

Take out shelves in the door

Fig. 6

Lift shelves upwards and take out.

Taking out the bottle holder

Fig. 9

Lift bottle holder at the rear and remove from the door shelf.

Ventilation opening

Fig. 11

The ventilation grille in the base can be removed for cleaning. To do this, depress the clips in the ventilation openings and simultaneously remove the ventilation grille forwards.

Tips for saving energy

- Install the appliance in a dry, well ventilated room! The appliance should not be installed in direct sunlight or near a heat source (e.g. radiator, cooker).

If required, use an insulating plate.

- Allow warm food and drinks to cool down before placing in the appliance.
- Thaw frozen food in the refrigerator compartment and use the low temperature of the frozen food to cool refrigerated food.
- Open the appliance as briefly as possible.

Operating noises

Quite normal noises

Droning

Motors are running (e.g. refrigerating units, fan).

Bubbling, humming or gurgling noises

Refrigerant is flowing through the tubing.

Clicking

Motor, switches or solenoid valves are switching on/off.

Preventing noises

The appliance is not level

Please align the appliance with a spirit level. Use the height-adjustable feet or place packing underneath them.

The appliance is not free-standing

Please move the appliance away from adjacent units or appliances.

Containers or storage areas wobble or stick

Please check the removable parts and re-insert them correctly if required.

Bottles or receptacles are touching each other

Move the bottles or receptacles slightly away from each other.

Eliminating minor faults yourself

Before you call customer service:
Please check whether you can eliminate the fault yourself based on the following information.
Customer service will charge you for advice – even if the appliance is still under guarantee!

Fault	Possible cause	Remedial action
The light does not work.	The bulb is defective.	Replace bulb. Fig. 12/B 1. Switch the appliance off. 2. Pull out mains plug or switch off fuse. 3. Slide cover forwards and remove. 4. Change the bulb. (Replacement bulb: 220-240 V a.c., E14 bulb holder, see defective bulb for wattage.)
	Light switch is jammed.	Check whether the light switch can move. Fig. 12/A
Floor of the refrigerator compartment is wet.	The condensation channels or drainage hole are blocked.	Clean the condensation channels and the drainage hole. See chapter Cleaning the appliance. Fig. 10
The temperature in the refrigerator compartment is too cold.	Temperature controller has been set too high.	Set temperature controller lower.
Appliance has no refrigeration capacity.	The temperature controller is in position 00.	Turn the temperature controller from position 00. Fig. 2/A
	<ul style="list-style-type: none">■ Power failure.■ The fuse has been switched off.■ The mains plug has not been inserted properly.	Check whether the power is on, check the fuses.

Fault	Possible cause	Remedial action
The refrigerating unit is switching on more frequently and for longer.	Appliance opened frequently.	Do not open the appliance unnecessarily.
	The ventilation openings have been covered.	Remove obstacles.

Customer service

Your local customer service can be found in the telephone directory or in the customer-service index. Please provide customer service with the appliance product number (E-Nr.) and production number (FD).

These specifications can be found on the rating plate. Fig. 13

To prevent unnecessary call-outs, please assist customer service by quoting the product and production numbers. This will save you additional costs.

Repair order and advice on faults

Contact information for all countries can be found on the enclosed customer service list.

GB	0844 8928989	Calls from a BT landline will be charged at up to 3 pence per minute. A call set-up fee of up to 6 pence may apply.
